

Ethanol Update Sept 26

Peace Land Piling of Fort Saskatchewan installed 104 - 26 foot screw pilings for North American Caissons on Saturday and Sunday. The pilings are situated under the four fermentation tanks in the Process Building. The total volume of these tanks is 2.4 million litres. Slim's Excavating is continuing site grade work and building the access road. Hipperson Const. will do another 300 yard concrete pour (which would be equivalent to 7500 feet of sidewalk) on the pad for the Process Building on Thursday. Sasktel has completed installation of telephones and internet service to the construction trailers. MacDonald Fencing of North Battleford is continuing to construct the security fence around the ethanol site.

Don't forget to attend the barbeque and project launch at the site on Thursday, Oct 4th.
